

2009 GEO Solar Rebate Program

The Governor's Energy Office Solar Rebate Program ended on June 30, 2009. For the most up-to-date information regarding future solar incentives in Colorado, please visit the [Governor's Energy Office website](#).

The Governor's Energy Office (GEO) established the Solar Rebate Program in response to the growing demand for renewable energy initiatives to allow homeowners and businesses to harness Colorado's abundant solar resources. The Colorado Solar Energy Industries Association (CoSEIA) is proud to have been selected to administer the GEO's Solar Rebate Program.

The Program was designed to extend rebates for solar technologies to Colorado residents and businesses throughout the state by providing matching grants to Program Partners to develop local solar rebate programs. This is an important step toward making solar technologies more accessible to residents in areas of Colorado that are not able to take advantage of the rebate programs offered in Xcel Energy and Aquila service areas.
